

1. Hotel Management System

a. SRS Document:

Hotel Management System

1. Introduction:

1.1 Purpose of this Document:

This document is the main aim of this document is to explain the various features and functions of the hotel management system.

1.2 Scope of this Document:

The document provides an ideal guide. The main scope of this document is to guide the manager on the various features of the hotel management system and describe how to achieve in providing those features to the customer. The overall system requires ₹50,00,000 and a time of 1 year to develop.

1.3 Overview:

The hotel management system provides the hotel owner a seamless way of managing rooms, the customer's needs and also keep track of empty & occupied rooms and the stock of general supplies. The customer will be able to book rooms and food & also provide reviews. The main purpose of the hotel management system is to provide a seamless ~~also~~ experience for the customer during their stay by guiding the manager & the staff.

2. General Description:

Manager/Hotel staff:

The main objective of the manager/hotel staff is to use the system to keep track of the no. of customers booking for a room, the no. of rooms available, the menu for the day, the different types of room currently occupied and accordingly provide data to the system on the customer's payment, check-in time, check-out time, cleaning time, price paid/due so that the system knows the real-time availability of rooms & services provided by the hotel.

Customer/Visitors:

The customer or visitors should login and provide the details such as check-in date, check-in time, check-out time and details and also if they are no. of people & any food allergies that they have. All this information provides the system to guide the manager/hotel staff on what they should expect and provide accordingly.

3. Functional Requirements:

Hotel Manager/Staff:

- The manager should be able to login with right credentials and also sign.
